# Electric Vehicles in Washington State

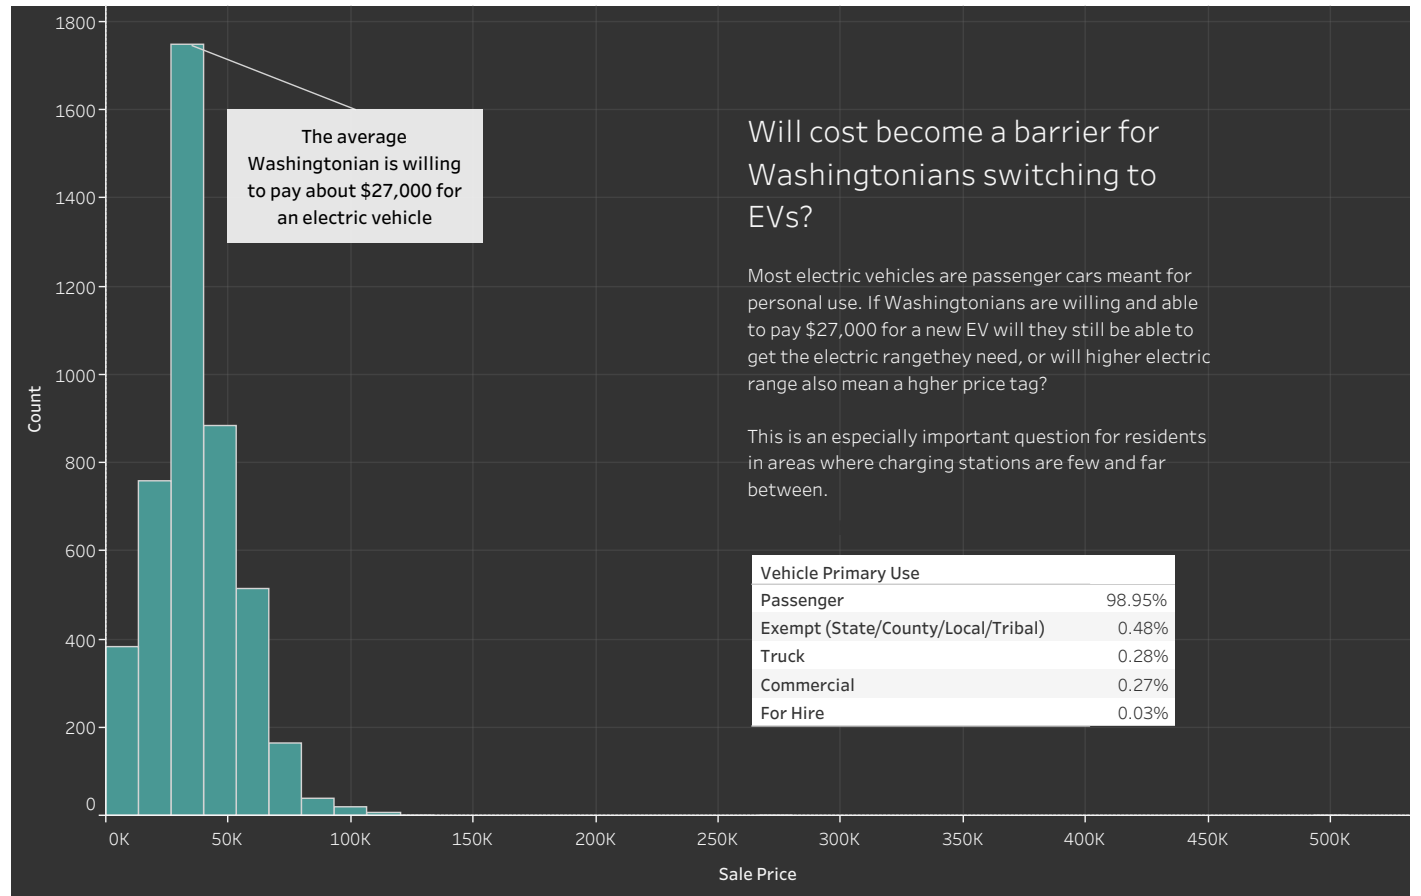

Recently Washington state declared an ambitious goal: 100% of new car sales must be electric vehicles by 2035.

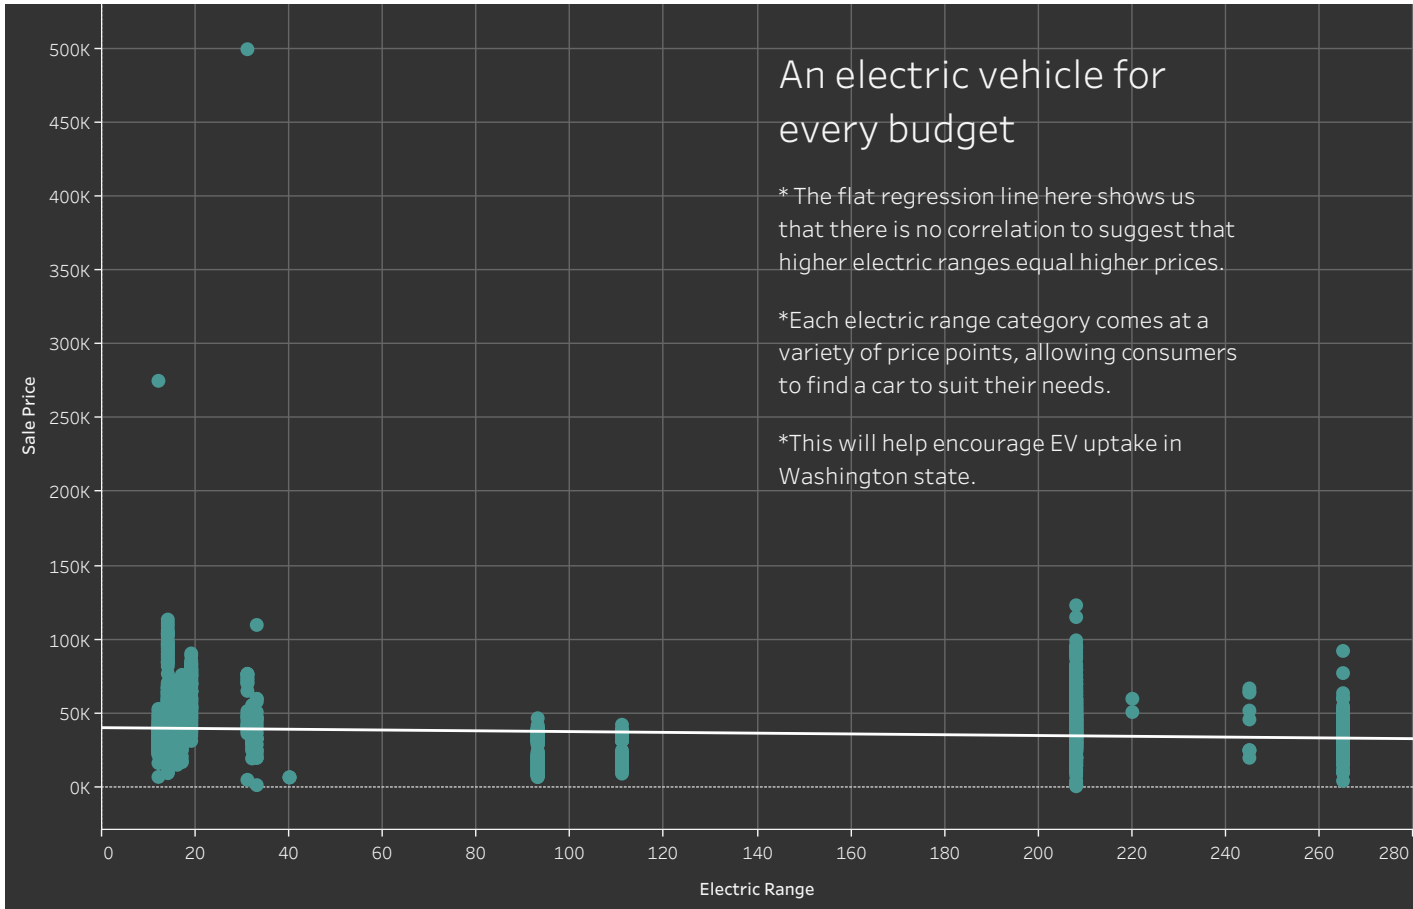

But how have electric vehicles fared in the state so far? This study examines uptake of electric vehicles to determine whether the state can reasonably achieve this monumental goal.

## Key Takeaways

\* Electric vehicle registration in Washington state is on the rise. In 2022 it was up 22% from the previous year.

\* 2 of the 5 identified EV sales categories heavily favored low electric range/ hybrid vehicles. These 2 categories make up about 50% of EVs registered in Washington.

- Heavy preference for short electric range/ hybrid vehicles may signal reluctance to rely 100% on electricity .

\* Democrat leaning counties along the I5 corridor have the most EVs. These are some of the most populated and heavily traversed areas of the state.

- Increasing access to EV charging stations and tailoring the messaging around EVs to address agrarian communities may improve their reception in Republican counties.
